

Quality logic probe. Will test all logic families (TTL, LS, CMOS, etc). Pulse/normal switch to indicate pulse or continuous signals. Three LEDs provide the logic level indication. Will detect pulse widths as narrow as 25nS and for frequencies to 20MHz.

Limited quantity available.

Specifications:

- * Working Voltage: DC 4 - 16V
- * Current Consumption: Max 32mA @ 5V
- * Frequency Response: Max 20MHz
- * Response Pulse Width: Longer than 25nS
- * Input Impedance: Min 1M ohm
- * Input Overload Protection: $\pm 250V$ DC/AC
- * Supply Voltage Protection: $\pm 50V$ DC/AC
- * Operating Temperature: -20 +70°C
